

Hot-adding a stack of SAS disk shelves to an existing pair of FibreBridge 7500N bridges

ONTAP MetroCluster

Ivana Devine, Martin Houser April 26, 2021

Table of Contents

Hot-adding a stack of SAS disk shelves to an existing pair of FibreBridge 7500N bridges

You can hot-add a stack of SAS disk shelves to an existing pair of FibreBridge 7500N bridges that have available ports.

- · You must have downloaded the latest disk and disk shelf firmware.
- All of the disk shelves in the MetroCluster configuration (both the new shelves and existing shelves) must be running the same firmware version.

NetApp Downloads: Disk Drive Firmware

NetApp Downloads: Disk Shelf Firmware

• The FibreBridge 7500N bridges must be connected and have available SAS ports.

This procedure is written with the assumption that you are using the recommended bridge management interfaces: the ATTO ExpressNAV GUI and the ATTO QuickNAV utility.

You can use the ATTO ExpressNAV GUI to configure and manage a bridge, and to update the bridge firmware. You can use the ATTO QuickNAV utility to configure the bridge Ethernet management 1 port.

You can use other management interfaces, if required. These options include using a serial port or Telnet to configure and manage a bridge and to configure the Ethernet management 1 port, and using FTP to update the bridge firmware. If you choose any of these management interfaces, you must meet the applicable requirements in Other bridge management interfaces.

If you insert a SAS cable into the wrong port, when you remove the cable from a SAS port, you must wait at least 120 seconds before plugging the cable into a different SAS port. If you fail to do so, the system will not recognize that the cable has been moved to another port.

Steps

- 1. Properly ground yourself.
- 2. From the console of either controller, verify that your system has disk autoassignment enabled:

storage disk option show

The Auto Assign column indicates whether disk autoassignment is enabled.

Node	BKg. FW. Upd.	Auto Copy	Auto Assign	Auto Assign Policy
node_A_1	on	on	on	default
node_A_2	on	on	on	default
2 entries w	ere displayed.			

- 3. Disable the switch ports for the new stack.
- 4. Update the FibreBridge firmware on each bridge.

If the new bridge is the same type as the partner bridge upgrade to the same firmware as the partner bridge. If the new bridge is a different type to the partner bridge, upgrade to the latest firmware supported by the bridge and version of ONTAP. See the section "Updating firmware on a FibreBridge bridge" in the *MetroCluster Maintenance Guide*.

5. On each bridge in the pair, enable the SAS port that will connect to the new stack:

SASPortEnable port-letter

The same SAS port (B, C, or D) must be used on both bridges.

6. Save the configuration and reboot each bridge:

SaveConfiguration Restart

- 7. Cable the disk shelves to the bridges:
 - a. Daisy-chain the disk shelves in each stack.

The *Installation and Service Guide* for your disk shelf model provides detailed information about daisy-chaining disk shelves.

b. For each stack of disk shelves, cable IOM A of the first shelf to SAS port A on FibreBridge A, and then cable IOM B of the last shelf to SAS port A on FibreBridge B

Fabric-attached MetroCluster installation and configuration

Stretch MetroCluster installation and configuration

Each bridge has one path to its stack of disk shelves; bridge A connects to the A-side of the stack through the first shelf, and bridge B connects to the B-side of the stack through the last shelf.

The bridge SAS port B is disabled.

8. Verify that each bridge can detect all of the disk drives and disk shelves to which the bridge is connected.

If you are using the	Then
ATTO ExpressNAV GUI	a. In a supported web browser, enter the IP address of a bridge in the browser box.
	You are brought to the ATTO FibreBridge home page, which has a link.
	 b. Click the link, and then enter your user name and the password that you designated when you configured the bridge.
	The ATTO FibreBridge status page appears with a menu to the left.
	c. Click Advanced in the menu.
	d. View the connected devices:
	sastargets
	e. Click Submit .
Serial port connection	View the connected devices:
	sastargets

The output shows the devices (disks and disk shelves) to which the bridge is connected. The output lines are sequentially numbered so that you can quickly count the devices.

If the text response truncated appears at the beginning of the output, you can use Telnet to connect to the bridge, and then view all of the output by using the sastargets command.

The following output shows that 10 disks are connected:

Tgt	VendorID	ProductID	Type	SerialNumber
0	NETAPP	X410_S15K6288A15	DISK	3QP1CLE300009940UHJV
1	NETAPP	X410_S15K6288A15	DISK	3QP1ELF600009940V1BV
2	NETAPP	X410_S15K6288A15	DISK	3QP1G3EW00009940U2M0
3	NETAPP	X410_S15K6288A15	DISK	3QP1EWMP00009940U1X5
4	NETAPP	X410_S15K6288A15	DISK	3QP1FZLE00009940G8YU
5	NETAPP	X410_S15K6288A15	DISK	3QP1FZLF00009940TZKZ
6	NETAPP	X410_S15K6288A15	DISK	3QP1CEB400009939MGXL
7	NETAPP	X410_S15K6288A15	DISK	3QP1G7A900009939FNTT
8	NETAPP	X410_S15K6288A15	DISK	3QP1FY0T00009940G8PA
9	NETAPP	X410_S15K6288A15	DISK	3QP1FXW600009940VERQ

9. Verify that the command output shows that the bridge is connected to all of the appropriate disks and disk shelves in the stack.

If the output is	Then
Correct	Repeat the previous step for each remaining bridge.
Not correct	a. Check for loose SAS cables or correct the SAS cabling by repeating the step to cable the disk shelves to the bridges.b. Repeat the previous step for each remaining bridge.

10. Cable each bridge to the local FC switches, using the cabling shown in the table for your configuration, switch model, and FC-to-SAS bridge model:

- On Brocade switches, the first port is numbered "0".
- On Cisco switches, the first port is numbered "1".

11. Update the disk drive firmware to the most current version from the system console:

disk fw update

You must run this command on both controllers.

NetApp Downloads: Disk Drive Firmware

12. Update the disk shelf firmware to the most current version by using the instructions for the downloaded firmware.

You can run the commands in the procedure from the system console of either controller.

NetApp Downloads: Disk Shelf Firmware

13. If your system does not have disk autoassignment enabled, assign disk drive ownership.

Disk and aggregate management

If you are splitting the ownership of a single stack of disk shelves among multiple controllers, you must disable disk autoassignment (storage disk option modify -autoassign off * from both nodes in the cluster) before assigning disk ownership; otherwise, when you assign any single disk drive, the remaining disk drives might be automatically assigned to the same controller and pool.

You must not add disk drives to aggregates or volumes until after the disk drive firmware and disk shelf firmware have been updated and the verification steps in this task have been completed.

- 14. Enable the switch ports for the new stack.
- 15. Verify the operation of the MetroCluster configuration in ONTAP:
 - a. Check whether the system is multipathed:

node run -node node-name sysconfig -a

b. Check for any health alerts on both clusters:

system health alert show

c. Confirm the MetroCluster configuration and that the operational mode is normal:

metrocluster show

d. Perform a MetroCluster check:

metrocluster check run

e. Display the results of the MetroCluster check:

metrocluster check show

f. Check for any health alerts on the switches (if present):

storage switch show

g. Run Config Advisor.

NetApp Downloads: Config Advisor

- h. After running Config Advisor, review the tool's output and follow the recommendations in the output to address any issues discovered.
- 16. If applicable, repeat this procedure for the partner site.
